ME - Automotive Engineering

Programme Educational Objectives (PEOs)

The department of Automobile Engineering offers programs that prepare students to face the industrial environment and impart vital problem solving skills. Our program objective supports the mission and vision of the department, targets the skill set and level our students are expected to reach.

We believe that the elements in the curriculum and the course work mapped to our objectives help us prepare the students for successful engineering career or in becoming an entrepreneur.

The objectives of the programme are to provide the following to the students:

PEO 1: Utilize their technical skills to the generation and implementation of new ideas or products in industry or government, or in pursuit of research studies.

PEO 2: Competencies to work well in local and global automotive environments, ability to be effective in designing systems and skillful in communication.

PEO 3: Ability to recognize the importance of and engage in life-long learning, develop multidisciplinary competencies for higher learning, career, and entrepreneurship.

PEO 4: An understanding of ethical responsibility and service towards their peers, employers, & society and follow these precepts in their daily activities.
