M.E. COMMUNICATION SYSTEMS

Programme Outcomes

a) An ability to apply knowledge of computing, mathematics, science and engineering for designing communication systems

b) An ability to identify, formulate, research literature and analyze communication system design problems

c) An ability to design a program, process, component or circuit of communication system to meet desired specifications with realistic constraints

d) An ability to design, conduct experiment, implement, analyze and test communication system to provide valid solutions

e) An ability to use the techniques, skills and modern EDA and software tools necessary for design and test of communication system.

f) An ability to analyze the impact of communication system design engineering solutions on the society and will be aware of contemporary issues and ethical responsibilities

g) An ability to design a communication system sustainable to social and environmental issues

h) An ability to function effectively as an individual or as a member or leader in a team

i) An ability to communicate effectively in both verbal and written form

j) An ability to keep abreast with state of art technologies through lifelong learning

k) An ability to apply knowledge of communication system for product development using appropriate management techniques with optimum expenditure
