PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

I. To prepare undergraduate students for pursuing successful careers in manufacturing that meet the needs of industry, pursue higher studies and to become entrepreneurs.

II. To prepare the undergraduate students for improving/innovating manufacturing processes leveraging the fundamentals of basic science, engineering science, modern machines and equipment, relevant software packages and management principles.

III. To inculcate professional and ethical attitude, team work skills and multi-disciplinary approach in undergraduate students while solving problems and an ability to apply engineering principles for societal development.

IV. To prepare the undergraduate students for global manufacturing/related activities by providing a learning environment which will impart excellence in engineering education, good communication skills, leadership qualities and a desire for lifelong learning.

PROGRAMME OUTCOMES (POs):

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering
activities with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**PROGRAMME SPECIFIC OUTCOMES (PSOs):**

1. Graduates will demonstrate the ability to improve a production process or system that meets desired specifications and requirements.

2. Graduates will demonstrate their ability to select a manufacturing process or a sequence of manufacturing processes to manufacture a given part/component according to the design specifications.

3. Graduates will be familiar with engineering software and equipment as practiced in manufacturing industry to formulate and solve real time problems and develop products that are eco-friendly by working with multidisciplinary teams.
